

28 ways to get better

The basic Zone-In unit offers an extended strike zone made up of three distinct colored zones for the beginner just learning how to pitch. Once that beginner is able to consistently keep his or her pitches within the three colored zones then he or she is ready for the Zone Isolator 1.

The Zone Isolator 1 (4 ways)

The Zone Isolator 1 gives you the capability to isolate all 4 corners at once. Now you can really work on locating your pitches and pitching sequences by moving the ball in and out and up and down in the zone.

The Zone Isolator 2 (20 more ways)

Once you have mastered using the Zone Isolator 1 you can really begin refining your pitching skills with the Zone Isolator 2. The Zone-Isolator 2 also mounts on the Zone-In unit, offering 20 additional strike zone isolations. It has three separate panels or flaps that can be configured to isolate only single areas (roughly 8 by 10 inch zones) throughout the strike zone by simply choosing which panel to flip up and by rotating the ZI2 to your desired location. Choosing which panel(s) to flip up coupled with the rotating capability of the Zone Isolator 2, you now have the ability to practice throwing to any area(s) or combinations of the strike zone, except the middle of course. The Zone Isolator 2 supports baseball clinic and softball clinic practice for experienced pitchers.

Field Practice (many ways)

The Zone-in is not only for pitchers but can be used for catcher and fielder practices for example, catchers can setup the Zone-In at 2nd base and work on their throwing accuracy to cut runners down trying to steal. Infielders and outfielders can set it up at any base to work on their throwing accuracy. And pitchers can set it up at the various bases to work on their pick-off moves.

The Zone-In will give you "the confidence to make the pitch".
